SPECIAL THANKS

Special thanks are extended to the many individuals and institutions who have generously offered their knowledge and council. The Cultural, Environmental, and City Planning offices of the City of Rome have been enormously supportive in the collecting of resource materials. The willing collaboration of the City Planning Office has been key to the development of the Piazza Tevere. In addition, the Tiber River Basin and Bridge Authorities, and the offices of the Civil Engineering and Hydrographic Studies, have provided invaluable technical information.
